MonSoteria Active Directory Practice

Protecting your Active Directory is vital for cybersecurity

If Active Directory is compromised hackers have the "keys to the kingdom".

Microsoft security team says that basic 101 measures are not taken to protect AD in 90% of cases

"MonSoteria helped us clean up and secure our AD. It's been a critical help!"

- CTO
Large Energy Company

The first objective of every hacker is to try and compromise your AD system as it has the credentials of every user.

It is therefore vitally important to devote special energy to make sure that AD is secure. No cybersecurity strategy can afford to treat AD as just any other system and hope to succeed.

Active Directory projects can be large, complex, and time consuming. Our approach helps prioritize things based on risks and we help get things in control quickly and cost-effectively.

MonSoteria's AD practice helps bring to you best practice relating to migration, management, and monitoring of AD environment to ensure its security. Call us now!
