MonSoteria Strong Authentication Practice

Relying solely on passwords may not be wise

Its time to strengthen and move beyond the password authentication framework.

Password based authentication is a weak link that needs to be strengthened immediately

> **"We implemented risk adaptive authentication and I am happy!"**
>
> **- CEO e-commerce company**

Passwords are the primary mechanism for authentication in the cyber world. Yet passwords are broken.

A new alternative is needed that can strengthen and enhance the existing password framework. Without this strengthening cybersecurity would be non achievable.

MonSoteria Strong Authentication practice can help you go beyond simple password based authentication to multi factor strong authentication that can also be Risk Adaptive.

Our full range of offering takes a holistic approach and includes best practices, products, tools, and APIs to help you strengthen the security around your authentication and credentialing systems.
