

*When faced with a decision to undergoing a medical procedure that could potentially cause a material life changing consequence, most people follow conventional wisdom and **"Get a second opinion"**.*

HOW IT WORKS?

Cybersecurity validaion services mimic the actions of cyber-threat actors to ensure security systems and processes are working as designed. To provide this service, many of the same techniques and tools employed by real hackers are used to evaluate an organizations true cybersecurity capabilities.

Responsibility

The failure of a cybersecurity strategy can create material consequences for a organization.

Reputaion

A successful cyber-attack will not only damage stakeholder trust in the organization, but it will also have a direct negative impact on stakeholder confidence of the organizations leadership

Reasonable

A test of a judgement. Have the precautions been taken and verified that your organization is prepared to protect stakeholder interest from cyber-threats

CYBERSECURITY VALIDATION SERVICES

THE VALUE OF A SECOND OPINION

We passed our SOX audit and our PCI compliance assessment with no findings. I felt pretty confident until the Monsoteria team showed me how easy to was for a hacker to obtain remote access to our network. I was shocked. This service is worth every penny.
